Mars (M&M) – KPI Definitions and Data Dictionary for Field Sales Data

Version: 1.0

1. Purpose

This document defines the key metrics and fields used in the Mars M&M's US field sales dataset. It is intended to ensure consistent understanding for reporting, analytics, and GenAI use cases.

2. Core Metrics

Total Sales (Total_Sales)

- Definition: Net sales value in USD for a given invoice line.
- Formula: Price_per_Unit × Units_Sold (after applicable on-invoice discounts).
- Usage: Used for revenue analysis by region, state, city, product, retailer, and sales rep.

Units Sold (Units_Sold)

- Definition: Number of consumer units sold for the SKU.
- Usage: Used to understand volume movement independently of price.

Price per Unit (Price_per_Unit)

- Definition: Effective unit selling price in USD after discounts.
- Usage: Used to analyze pricing patterns and mix effects.

Operating Profit (Operating_Profit)

- Definition: Profit contribution after deducting direct product costs and variable selling-related expenses.

- Usage: Used to assess profitability at different aggregation levels (region, product, rep).

Operating Margin (Operating_Margin)

- Definition: Operating profit expressed as a percentage of total sales.

- Formula: (Operating_Profit / Total_Sales) × 100.

- Usage: Used to evaluate efficiency and profitability across segments.

3. Dimensional Fields

Region

- Values: Northeast, Midwest, South, West.

- Usage: High-level geographic segmentation for dashboards and reports.

State

- Definition: US state code (e.g., NY, CA, TX).

- Usage: Mid-level geographic granularity.

City

- Definition: City name corresponding to retailer location.

- Usage: Local market analysis.

Retailer

- Definition: Name of the retailer (e.g., Walmart, Target, Kroger).

- Usage: Customer-level analysis and key account performance.

Retailer_ID

- Definition: Internal or synthetic ID for the retailer.

- Usage: Joins with other systems or lookup tables where needed.

Product

- Definition: M&M's SKU description (e.g., "M&M's Peanut Family Size 10.7oz").

- Usage: Product mix and assortment analysis.

Sales_Method

- Definition: Channel through which the sale was captured.

- Values: Field Visit, Tele-Sales, Distributor Order, Online B2B.

- Usage: Channel performance analysis and route-to-market insights.

Invoice_Date

- Definition: Date of the invoice in YYYY-MM-DD format.

- Usage: Time-series analysis (daily, weekly, monthly trends).

Sales_Rep_Name

- Definition: Name of the Mars sales representative responsible for the account/transaction.

- Usage: Rep-wise performance dashboards, incentive calculations, and territory reviews.

4. Aggregation Guidance

- Region-level:

Use Region along with Total_Sales, Operating_Profit, Units_Sold, and Operating_Margin to create bar charts and regional comparison views.

- Rep-level:

Use Sales_Rep_Name with Total_Sales, Units_Sold, and Operating_Margin for rep performance reports.

- Time-level:

Group by Invoice_Date (or derived month) for trend charts and seasonality analysis.

5. Notes

- All monetary values are in USD.

- Margins and financials are illustrative and may not reflect actual Mars financial reporting rules.
